

REALTI/cp v6.28 Patch

Release Notes and Patch Instructions

March 21, 2006

The REALTI/cp Ver. 6.28 Patch updates the e-reg[®] export to Teraview[®] by adding the Signing Authority for builder and suite number in Municipal Address.

How to Run the Update

1. Under the REALTI/cp Ver 6.28 *Patch E-reg* heading, double click on Download Update here.
2. You will be asked whether to save the file to disk or run it now. Select to save it to disk and select the location where it will be saved.
3. If your browser gives you the option, you can run the patch as soon as it has been downloaded by clicking on *Open* when the download is complete. If not, after the file has been downloaded, use Windows Explorer or My Computer to find the *cp628up.exe* file and then double click on it.
4. The Install Shield program will run. Enter the password as indicated on the fax you received regarding this update.
5. Browse to find your CAKE structure. Then click Next.

(If you don't know the location of your CAKE structure, you can find it on your CAKEwin icon. To do so, left click once on the CAKEsoft Programs icon on your desktop, then right-click on the Cakewin icon inside it. Choose Properties, Shortcut. In the Target box, you will see a long command line. (Be sure to scroll as far LEFT in this box as possible.) You will see a line such as Af:\cake\bin\cakewin.exe - gf:\cake\glob@ The first letter tells you the drive and the part immediately after this up to the first cake tells you where cake is located on that drive. In this case, the CAKE folder is simply f:\cake. If the line were instead, f:\apps\cake\cakewin.exe ... , the folder would be f:\apps\cake)

6. Version check. If your version is previous to REALTI/cp Ver. 6.21 you will get a message telling you so. You will need to run the REALTI/cp Version 6.21 Update, available on the web, before continuing with the 6.28 update.
7. ***CAKEsoft Programs Setup is performing the requested operations.***

Please wait while the update installs any new files required. Note that if, during this process, you get a message indicating Read Only File Detected, this means that a Read Only file has been detected by the update. You should tick off the **Don't display the message again** box and answer Yes to continue with the operation.

8. ***CAKEsoft has been installed on your system.***

Click ***Finish*** to complete the program.

9. The program has now been updated. You can load CAKEwin as you normally do.
